                                                                                            GNU Midnight Commander
      GNU Midnight Commander is a directory browser/file manager for Unix-like operating systems.
             Disable usage of graphic characters for line drawing.
             Force black and white display.
             Force color mode, please check the section Colors for more information.
             Specify a different color set in the command line. The format of arg is documented in the Colors section.
             Display configure options.
             Disable mouse support.
             Start the internal editor. If the file is specified, open it on startup. See also meedit (1).
             Display the compiled-in search paths for Midnight Commander files.
             Display extended info about compiled-in paths for Midnight Commander.
             Force a "normal tracking" mouse mode. Used when running on xterm-capable terminals (tmux/screen).
             Reset softkeys to their default from the termcap/terminfo database. Only useful on HP terminals when the function keys don't work
             Specify a name of keymap file in the command line.
```

Midnight Commander.
